Description :

Prsentation de l'diteurFor courses in orthopedics, physical therapy, athletic training, and physical examination, in programs for healthcare providers including physicians, nurses, athletic trainers, physicians assistants, physical therapists, and occupational therapists. This is the fields most comprehensive evidence-based guide to clinical tests for orthopedic physical examination. It presents complete explanations and photography visualizing all commonly used physical exam tests for all body regions, including both neurological screening tools and conventional tests. The quality of research supporting each test is assessed using the QUADAS quality instrument, which analyzes the extent to which bias may have influenced diagnostic values. Diagnostic values are reported wherever they exist, and summary Utility scores are

provided for each test based on the authors interpretation of the research and their use of the tests in clinical practice. This edition adds 200 new tests, presents valuable clusters of tests, and contains two entirely new chapters: one on visceral assessment and medical screening, and another on temporomandibular examination. For courses in orthopedics, physical therapy, athletic training, and physical examination, in programs for healthcare providers including physicians, nurses, athletic trainers, physicians assistants, physical therapists, and occupational therapists.
